Updated: 15th Feb, 2012

We at Australian Native Farm Forestry have had 20 years of experience on propagating and transplanting trees and are continuing to expand the species and quantity of seedlings grown. We are currently growing almost 500 000 seedlings and over 250 different variety's the majority of which are local to this area. All seedlings are grown in *Hyco V 93 trays*.

Every effort will be made to grow species listed below but due to seed availability and germination some plants may be unavailable and temporary out of stock. Large orders of unlisted species will also be considered (200+). Delivery is available at 70 cents per km round trip regardless of quantity. Freight is also available anywhere in Victoria and Sth NSW by arrangement.

Due to the difficulty involved in propagating some varieties, species marked with an # are 30% extra in cost and "limited to no more than 25% of total order. Species marked with @ are \$2 each\* regardless of quantity

Recommended tree spacing -large 4m medium 3m small 2m with small shrubs, groundcovers and wild flowers spread in between. It is also recommended to cultivate land and spray with a soil sterlant like "SIMAZINE." Guard seedlings and place a slow release fertilizer tablet with seedling, and/or water with something like maxicrop.

For further information on trees for special conditions. ie. Salinity, soil types, wildlife, local species, wood lots or agro forestry.
